

Whole House Comfort Ventilators Provide a Greener Approach to Home Cooling

Falmouth, MA, August 23, 2008 --(PR.com)-- As consumers we are always looking for ways to save a little green in our wallets. Once in awhile a product comes along that does just that while helping make less of a negative impact on the environment. Heyoka Solutions, LLC offers its uncompromising design of a whole house comfort ventilator, the [Comfort Stream](#)[™] that will quietly and efficiently bring cooling comfort into your home.

This radical approach to natural cooling has over 30 years of design experience in the whole house fan market behind it. Their engineers have developed many of the products that are considered tops in this field, and have taken the next step forward with the Comfort Stream. What makes it different? Unlike conventional whole house fans it allows air to be drawn from four separate rooms. People sleep in bedrooms (not in the hallway) and close their doors at night. Comfort Stream lets them do that. It is designed to be vented directly to the outside and doesn't pressurize the attic like conventional fans that can force the stale, smelly attic air back down into the house due to inadequate attic venting. Because the fan is mounted remotely, it's quiet. "People need quiet, refreshing air movement at night," says Comfort Stream "fan" and clinical social worker, John Dolen. "This fan enhances the natural cooling effect without drying out the air like air conditioning." It's energy efficient, using one third of the power of a central AC unit.

Whole house cooling with the Comfort Stream whole house comfort ventilator is the most natural and safest way to take advantage of the cool outside air that usually comes after the sun goes down on a hot day. It's the only fan of its kind that is thoroughly safety tested, HVI certified and meets or exceeds all applicable state and local building codes. Hundreds of SuperFans (the twin product to the Comfort Stream also made by Heyoka Solutions) have been installed all across the country to rave reviews.

Revolutionize your home and take advantage of some natural, hybrid cooling for the dog days of summer that are still with us. And it will be ready for you when the cooling season comes back around year after year. For more information please visit them at www.heyokasolutions.com or call them at 866-389-8578.

Heyoka Solutions, Inc. is a woman owned business based on Cape Cod in Falmouth, Massachusetts. One of the principals is a full member of ASHRAE and is an advisor for the LEED for Homes program. The name, Heyoka, is from Native American roots representing one who is skilled at approaching problems from opposite, backward, or unusual angles, arriving at solutions that others might miss.
