

## **Roulston Favors Canada, Alaska, China for New Mining Investment Opportunities**

*Highly regarded mining newsletter writer Lawrence Roulston's favorite geography for new and profitable investment opportunities include Canada, Alaska and China. His favorite stocks in those areas include NovaGold (TSX: NG), Northern Dynasty (TSX: NDM) and Pacific Asia China Energy (TSX: PCE).*

Sarasota, FL, May 04, 2006 --(PR.com)-- Highly regarded mining newsletter writer Lawrence Roulston told StockInterview.com, "Often the better value to be had, or the better opportunity, is in being a little bit out of step with the crowd." Roulston favors areas that are not crowded and where budding mining opportunities are emerging. He has recommended against certain countries because of "political difficulties" in dealing with those jurisdictions, saying, "I think some of that mining is coming back closer to home, which is right here in Canada." Canada was at the top of his list followed closely by Alaska and China.

The theme of the interview with Lawrence Roulston was to answer the basic question, often posed by many investors through this stampeding commodities bull market: "Are there any great, NEW resource investments left?" Roulston recommended favorites in each country: NovaGold (TSX: NG) in Canada, Northern Dynasty (TSX: NDM) in Alaska and Pacific Asia China Energy (TSX: PCE) in China.
