

Clean Marine Systems, Inc. Launches Automated Heat Exchanger Flush Systems. The Latest in a Line of Innovative Products That Promote Automated Maintenance / Clean Oceans.

Headquartered in Las Vegas, NV, Clean Marine Systems, Corporation is an innovative leader in electronic controlled pump and valve systems. The Clean Marine System is the first of a family of products targeted at the yachting heat exchanger maintenance market. They are also introducing a new innovative "Green Marine Product" line for the marine and yachting enthusiast. For more information please visit www.cleanmarinesystems.com

Las Vegas, NV, August 28, 2008 --(PR.com)-- Clean Marine Systems Corp. a leader in automated electronic control devices for fluid handling has a unique and innovative automated flush system for on-board, closed loop heat exchangers. Using a series of marine grade valves and the power of DSS Pi series technology, the Clean Marine System provides a fool proof and simple to install kit that manages the flush maintenance of multiple heat exchangers on a vessel with a single touch. The Heat Exchanger System can be installed by authorized installers for existing vessels or by the yacht manufacture.

Michael Loffer, Director of Marketing, Mikelson Yachts, Inc writes "With an new marine product as innovative and timely as yours, I felt compelled to send you the following letter." He continues: "When I first heard of CMS's new Heat Exchanger Flush System, it was another on of those, "why didn't I think of this!" there is nothing like it on the market, a stroke of brilliance, in the often times neglected areas of marine raw water heat exchanger maintenance. ...I think my personal favorite feature is that the system even allows boat owners to run an "instant back flush operation" on any of the CMS serviced marine raw water intakes, during vessels operation, in order to dislodge kelp, plastic bags and other debris ...Your product is a total winner and I will recommend it to all my clients..."

"I am thrilled to have brought this new innovative product to market so quickly, with the help from our control supplier DSS, we are now ready to deliver a very high quality automated control system that can service all on-board heat exchangers." said Perry Anderson, President and CEO of Clean Marine Systems. "DSS was able to generate several working prototypes in a very short amount of time that enabled us to test and launch this new product within a very tight timeframe."
