

Jack Russell Software Offers Free Accounts on JackFile.com

JackFile.com the new online document management and storage application is now offering a free 25mb storage locker for new members.

Charleston, SC, September 06, 2008 --(PR.com)-- Jack Russell Software Company, LLC, an innovative custom software development company is providing free membership accounts for the JackFile.com document management application.

The service is provided for Business Professionals who need a secure place online to store their important and sensitive documents, that that they can easily retrieve anywhere there is a network connection.

JackFile.com makes it easy for users to securely store their personal documents securely online. This service may be used to protect documents that could be destroyed in natural disasters. The application requires zero training and is as easy to use as sending an e-mail with an attachment.

JackFile.com was created to allow members to securely protect and organize important documents in an off-site location, so if something happens to their computer or paper documentation, they will have a safe location to easily retrieve these documents.

Other features have been added to enable the secured sharing of these documents to associates identified by the member, for a given amount of time.

JackFile.com has also recently released two new features that allow users to store and share files by sending them to JackFile via e-mail. So members can jackfile documents by simply sending an e-mail.

For more information on JackFile.com and how to sign up for your free account go to www.jackfile.com
