

Brand New Imonitor Employee Activity Monitor 4.7 Released, World First Employee Monitoring Software Which Can Save Logs on Remote Server

Imonitorsoft released Employee Activity Monitor 4.7, an all-in-one solution that records and controls all employee computer activities and prevents loss of critical and confidential data from leaving.

New York, NY, September 23, 2008 --(PR.com)-- Imonitor, the global award-winning provider of Computer Monitoring Software, today announced the release of Employee Activity Monitor 4.7, an all-in-one solution that records and controls all employee computer activities and prevents loss of critical and confidential data from leaving.

What's new in Employee Activity Monitor v4.7?

Imonitor Employee Activity Monitor 4.7 can store the important logs in a centralized database on a remote server. Now users can save all the logs include keystrokes, email logs, file logs, clipboard logs, website logs, ftp logs, print job logs, instant message to a specified server, in this way the logs will never be lost even if the employee reformat his hard disk.

How to enable the new feature?

First of all, clients need to uninstall the old version and download the new version.

The Agent Program uploads collected logs to server computer automatically at interval of X minutes user specified.

Click 'Agent Management -> Log synchronization' to change the value.
