

Ethernet Extension Experts Announces the World's Highest Throughput Ethernet Extension Kit/Repeater That Also Includes Built in Power Over Ethernet Support

Enable-IT, Inc., a global dominating manufacturer of access solutions for broadband networks, today announced the availability of the updated Enable-IT 860 100Mbps Full Duplex Ethernet Extender Kit – the world's First Ethernet Extension Kit/Repeater that also includes IEEE 802.3af Power over Ethernet (PoE) support natively.

Las Vegas, NV, September 24, 2008 --(PR.com)-- The Enable-IT™ 860 Single-Line Ethernet Extender is a unique high speed solution that drives true 100MB throughput Ethernet data and dual voice lines up to 6,000ft or 1,828m distance over a 1-Pair (2 wire) telephone line wiring or better.

These units use an industry standard RJ-45 (8-pin) connector for ease of use installation and supports the use of spare pairs for delivering a second voice line or your PoE power transparently. (PoE power will only be effective up to 1,200ft).

Hands down these are the highest throughput performing and most versatile Ethernet Extenders on the planet, bar none. These units are the most reliable and easy to install on any wiring. They put the over priced and lower performing competition to shame.

For detailed information on this unique product, please see the Ethernetextender.com website.

Ethernet Extension Repeaters are modules that can be used on existing Ethernet cabling and allow users to drive their Ethernet segments beyond the IEEE 802.3 limitations for distance restriction of 328 feet or 100 meters.

Ethernet Extension Repeaters drive longer range, high-speed data communication between geographically separated LANs or LAN devices and create very cost effective bridged-Ethernet connections. Ethernet Extenders can be used for Point-to-Point (Backbone) runs or Point-to-Multipoint (Ethernet DSLAM - Digital subscriber line access Mux - telephone wiring install) and are typically deployed in Commercial, Residential, Industrial and Hospitality High Speed Internet Access environments.

Ethernet Extension Repeaters can be referred to as Network extenders, LAN extenders and Ethernet cable extenders and use a variety of transmission technologies over physical media such as copper or fiber. Extenders that use copper wiring operate on 1 or 2 pair unconditioned wiring (POTS) up to category rated twisted pair (CAT3...CAT6).

Key Benefits of using Ethernet Extension Repeaters

- ° Plug and Play modular units - uses common RJ-45 Ethernet jacks
- ° Use existing copper wiring (1 or 2 pair) untwisted telephone up to Category rated twisted pair
- ° Huge Cost saving over traditional copper and Fiber solutions

° Installs in minutes - have your remote office LAN up in minutes

What to look for in buying an Ethernet Extension Repeater Kit

- ° Cost - Full wire speed does not have to cost a fortune - Beware
- ° Speed - The key reason for Full LAN speed - don't settle for low bandwidth
- ° Ease of Installation - Country specific power adapters, no config or programming
- ° Reliability - Research community user opinions and reviews
- ° Support - Look for responsive, informative, and creative solutions
- ° Solutions - Find a company that will listen to your needs and create new products to match.
- ° Warranty - Industry standard is 90 days. Look for 1 yr coverage or extended warranties.
- ° Guarantee - Be smart, get a money back satisfaction guarantee

Enable-IT is a Premier OEM Manufacturer of Broadband communication technologies and solutions for the hospitality, commercial office, and MxU (multiple-dwelling, multiple-tenant, multiple-commercial, multiple-hospitality) unit marketplace. Enable-IT brands its products for the most discriminating customers who are looking for superior, cost effective technology to preemptively dominate their industries. Continued Success is built on our ability to research, develop and deploy revolutionary Broadband Communications Technologies that exceed the demands of the industry and outpace our competitors. Based in Las Vegas, Nevada with distributor sales and technical support offices in the United States, Europe, Middle East and Asia Pacific.
