

LAB38 to Support Web Sites Built with Ruby on Rails

Denver, CO, June 20, 2006 --(PR.com)-- LAB38 providing affordable and innovative web design and web hosting packages, now supports Web sites created using Ruby on Rails.

Ruby on Rails is an open-source framework which lets developers easily assemble rich and dynamic Web sites. Programming with Rails allows a Web designer to wrap applications easily around a database. It has been widely acclaimed in Web development and software engineering circles as a new standard for ease of development and speed of delivery.

About Lab38

LAB38 is a full service web design and hosting company, providing innovative, personal, and creative designs and hosting services that don't break the bank. We work closely with our clients to build a relationship that results in the best possible product, whether it's a logo, an illustration or a complex website. Our goal is to provide attractive and functional products that meet the needs of the business or individual. We are true believers in the equal and inseparable power of visual and functional communication. We take our commitment to the client and the design seriously. We are not satisfied until the client is.
