

## **AAI Environmental Corporation's Employees Telecommute, Which Promotes Conservation and Job Satisfaction by Using Technology to Conduct Environmental Assessments**

*AAI Environmental Corporation's use of the latest technology for their environmental assessment company's daily communication and collaboration is helping to reduce its employees daily commute fuel consumption and is promoting job satisfaction, by allowing many of its employees to work from their home offices.*

Nashville, TN, April 28, 2007 --([PR.com](#))-- AAI Environmental Corporation incorporates the latest computer networking and communication technologies to allow many of its employees to work from their home offices from all over North America. Their virtual office environment allows for instant and constant communication in their collaboration, and actually makes their staff more productive in completing Phase 1, 2 and 3 environmental site assessments at locations throughout North America, while reducing fuel consumption and paper.

AAI has encouraged its clients to go "paperless" on their reports, which reduces paper consumption, and uses digital communications whenever possible. Since their employees work from their home offices, they are not driving back and forth to a central office daily and using fuel unnecessarily. AAI is trying to set an example for conservation for other corporations to help reduce carbon dioxide emissions from vehicles, as much as possible. The reduction in paper in its reports can also help reduce the destruction of our forests, the lungs of our planet. Since AAI performs [environmental assessments](#), it only makes sense.
