

The Rebound Mutual Fund Trader Doubled Subscribers' Portfolio Values in Just 32 Months

Venice, FL, May 29, 2007 --(PR.com)-- GDW Investment Systems, LLC, the creator of the Rebound Trading Systems, realized an important goal this week by doubling the portfolio value of its Rebound Mutual Fund Trader system in less than three years. Subscribers who started with a \$100,000 in August of 2004 now have profits of over \$100,900.

In achieving a “double” in less than 3 years, the Rebound Mutual Fund Trader is currently generating a compounded annual rate of return of 29.4% -- more than double that of the S&P 500 at 12.1% over the same period of time. The system made a total of 64 trades with 72% being profitable. The profit to loss factor is an impressive 5.8 : 1. The average holding period was 106 days.

Gerry Wollert, the President of GDW Investment Systems, LLC said, “Most of my subscribers earn a good income and have money to invest. However, they do not have the time or expertise to consistently generate an excellent return on their investments. All of the Rebound Trading Systems take less than 30 minutes per month to trade with their online discount brokers. Importantly, these systems have stood the test of time.”

Exchange Traded Funds, or ETFs as they are known, are the fastest growing segment of the financial markets today. There are now over 500 ETFs from which to choose. The Rebound ETF system is currently generating a return 1 ½ times that of the broader S&P 500 Benchmark.

As a system developer, Gerry Wollert is somewhat unique in that he invests his own money in every one of his trading systems. His trading signals are emailed to subscribers to let them know what trades he is planning in his own accounts. He employs a strict stop loss and profit protect discipline to cut the losses short and let the profitable trades run.
