

GPS with Multimedia Functions

New NavAccess MX100 Combines GPS with Popular Entertainment. Functions Including Movies, Music, Photo and Ebook Viewing

Hong Kong, China, June 28, 2007 --(PR.com)-- Access Technology Company announced this week their newest NavAccess MX100 GPS and Media device is ready for shipment by early August. The firm is making lots of 5,000 units available to distributors and retailers worldwide. The unit price is low enough to make it an affordable option for millions of electronics users.

NavAccess MX100 combines state of the art GPS features with a full range of media capabilities to create a hand-held GPS/Media Center that users can take anywhere.

The attractive unit has everything from high speed 400 MHz processor to highly sensitive SiRF Star III GPS receiver to the WinCE 4.2 operating system -- all packaged in a sleek European design.

Hand held GPS devices have become extremely popular with individuals everywhere. It makes perfect sense to consumers to combine key entertainment features into the GPS unit they're constantly carrying with them.

A recent study by TeleAtlas revealed use of GPS shortened the average trip by 5%, shortened the duration by 15%, eliminated 37% of wrong turns, while significantly reducing risk of accidents.

Perhaps even more important, use of the NavAccess MX100 can save its owner an average 12.5% on fuel costs. These days when gas prices are at record highs around the world, people everywhere are looking for ways to save on fuel. The NavAccess MX100 is practically a mandatory accessory for any driver.

The NavAccess MX100 is particularly valuable for the growing number of people taking mass transit to and from their jobs. Waits for trains, busses, and taxis can be made more enjoyable with the viewing of movies, photos, music and more.

Rather than toting a GPS unit, an iPod, an Ebook reader and more, you can simply take a single NavAccess MX100 to handle everything you need when you are traveling.

Those who order more than 2,000 units can specify colors for the front cover. Clients can expect to take receipt of ordered units in about 45 days.
