

Hydrowarehouse.com Features EZ-Clone Plant Cloning System

Detroit, MI, July 24, 2007 --(PR.com)-- HydroWarehouse.com, an online distributor of discount hydroponics supplies, is featuring the EZ-Clone plant cloning system on its extensive online catalog of products designed to help the hydroponics gardener.

The EZ-Clone system enables a gardener to quickly root cuttings, with no need for rooting medium. The system uses reusable neoprene "collars" to hold plant cuttings, allowing the maximum amount of oxygen to penetrate developing root systems. The collars are slit for easy insertion and removal of rooted cuttings for transplanting to the gardener's growing media of choice.

Each EZ-Clone unit features a high flow rate irrigation system and an external air intake and the systems come in three sizes, ideally suited for both hobby and commercial growers. The EZ-Clone plant cloning systems bath developing root systems with an oxygen enriched super fine mist that promotes extremely fast root development for even the most difficult plants to propagate through cuttings. The EZ-Clone 30, ideal for hobbyists, provides 30 cutting sites and a 12-gallon reservoir; the EZ-Clone 60 doubles the propagation capacity and includes a 16-gallon reservoir; the EZ-Clone 120 is suited for larger commercial applications and has a 22-gallon reservoir.

All systems include the applicable reservoir, submersible misting pump, mist manifold with commercial quality misters, high-capacity air pump for reservoir oxygenation, neoprene collars and all necessary tubing and complete instructions.

HydroWarehouse's secure online catalog features the EZ-Clone products, as well as more than 1,000 other hydroponic products, hydroponic systems and hydroponic equipment and gardening products, all to allow customers to garden year-round inside their homes. The online shopping cart provides state-of-the-art features to ensure security and convenience.

HydroWarehouse.com offers the best in hydroponic products as well as world-class customer service at warehouse prices. If you have any questions or would like to place an order, visit 2hydrowarehouse.com.
