

## **Collagen + Algae + Vitamin E = "Colvita": No Diet Supplements Possessing These Properties Existed Yet. This is the First One.**

*The development of life on Earth is based on protein. It dies completely when its peptide chains break down. Yet some primitive organisms are able to return their proteins to full vitality after long periods of complete hibernation. Collagenlife Intl. introduces Natural Collagen "Colvita" that is the newest generation of dietary supplements, which offers the most sophisticated and natural way of activating the production of collagen in a human's body.*

Kingston, Canada, August 23, 2007 --(PR.com)-- Many people know about the importance of blood in a human organism but only a few know that collagen is the main building protein of bones, joints, skin, hair, nails, the skeletal system, organ of sight, kidneys, liver and alimentary tract, having influence on healthy support and maintenance of the entire structure.

Unfortunately, free radicals such as toxins and the enzyme collagenase, destroy the fibrous proteins causing a diminution in the amount of microelements and vitamins which are vital to the continuous replenishment of collagen by fibroblasts and chondrocytes. Thus the natural production of collagen is drastically reduced.

For years scientists have searched for a miracle panacea to increase production of collagen in the human body. In the early 90's researchers discovered the specific value of collagen obtained from certain fish by-products. They examined two methods of obtaining collagen:

1. From all of the fish by-products.
2. Extraction of collagen from the fish skin only by using an acidic polysaccharide derived from plant tissue.

The type of collagen gel which was obtained using the second method is a pure and biologically active protein that penetrates the skin and enters the extra cellular space, supplementing any deficiencies of collagen in tissues and organs according to their needs.

Currently Collagenlife Intl. is proud to introduce the newest product which is produced by using the process of Lyophilization or Freeze Drying in which water is removed from the product after it is frozen and placed under a vacuum receiving the purest form (98%) of Fish Collagen Powder.

Colvita - dietary supplement and nutricosmetic in capsules is the complex of the purest form of Fish Collagen received by process of Lyophilization, algae (*Fucus Vesiculosus*) and Vitamin E.

Collagen is the most important protein, not only for humans, but for all the vertebrates. It makes up more than 30% of the protein mass in the human organism. It is the main component of the most important tissue in our lives - connective tissue. We are literally swimming in collagen.
