

Multilizer and nCore Partner to Enhance Localization of Embedded Device Software

Multilizer's translation and localization platform now supports efficient translation and localization of embedded software developed with nCore's resource management technology.

Helsinki, Finland, September 28, 2007 --(PR.com)-- Multilizer, leader in localization and translation software, today announces co-operation with nCore Ltd, leading provider of localization software solutions for embedded devices. Now software developed with nCore's nRes Resource Manager can be effectively localized and translated using Multilizer.

The companies have developed a Multilizer plug-in that enables Multilizer's advanced tools to translate the language files from nCore's nRes Resource Manager. With Multilizer, nCore's clients have access to the state-of-the-art translation tools including automatic translation quality checks, translation repositories and translation memories, machine translation, translation process automation, etc.

Multilizer is leader in globalization software technologies. With Multilizer's tools it's easy to translate e.g. Symbian's LOC and RLS files. Over 4500 companies in 60 countries and numerous Fortune 1000 companies, such as Intel Corp., Compaq, Nokia, Siemens, Xerox use Multilizer's technologies to localize their software for the global market.

The Multilizer's nRes plug-in is already available at both companies. Please contact sales@multilizer.com or sales@ncore.fi
