

Pet Porte is the World's First Microchip Cat Flap

Cats and cat owners can now breathe a sigh of relief. This new electronic cat flap makes the home more secure than any other type of cat flap and frees cats from wearing potentially dangerous collars as well as reducing the number of dead animals brought inside.

Nottingham, United Kingdom, October 25, 2007 --([PR.com](#))-- The amazing new [Pet Porte RFID Microchip Cat Flap](#) is the first cat flap in the world to take advantage of the IdentiChip implants that are now routinely implanted in most cats and dogs in the United Kingdom.

The Pet Porte cat flap is designed in response to the millions of cat owners who complained about other cats getting in through traditional kinds of cat flaps, paws getting stuck in collars, or worse cats being strangled when their collar got caught on a tree branch while outdoors.

Unlike magnetic or infrared types of electronic cat doors, the Pet Porte microchip cat flap works without a collar. This means cats can enjoy a thrilling sense of freedom and homes are safer because other cats cannot get inside.

With magnetic cat flaps currently on the market other cats with similar collars can still get in, and more sophisticated infrared cat doors still rely on a rather bulky collar which many cats detest.

The new Pet Porte cat flap works using the cats own microchip so that only cats programmed into the system can get inside with astonishing ease. Other cats are quickly and firmly locked out.

The door has a clever design that prevents tampering from the outside. Even with the most secure infrared or magnetic cat flaps, clever cats learned to paw the doors open. Not so with the Pet Porte. This new type of cat flap represents the ultimate in pet access security.

Furthermore the unique daylight sensor in the Pet Porte electronic cat flap can keep pet cats indoors at night. This feature reduces the amount of dead birds, rats, frogs, and mice brought inside and reduce the risk of cats getting run over or injured in fights or disturbing neighbours and cuts down on the cleaning work.

Cat owners who have already purchased the first batches of Pet Porte say that it makes their cats feel happier and more secure because cats know that if they are chased they can run inside and no other cats or animals can follow them in. Also without a risky collar cat owners know their cats are safer when playing outside.

Cat owners who want the very best for their cats would make a wise decision choosing the Pet Porte microchip cat flap.

The Pet Porte Microchip Cat Flap retails for between £99 and £125.
