

Mi Business System by JM Software Offers Complete Mobile Business Solution

Lowell, MA, January 03, 2008 --(PR.com)-- For those that order pizza or Chinese food delivery often it might not come as a surprise that mobile payment and accounting systems are becoming more and more popular. This is because chances are you have paid a driver with a credit card on the spot, with no cords, heavy machines or kiosks, watching the delivery person swipe a credit for payment through what looks like a cell phone. This magical occurrence is starting to emerge as a popular way for businesses to increase productivity and profits while limiting data loss.

The Mi Business System by JM Software is the ultimate mobile point of service system. This system schedules appointments and services, tracks inventory, and processes credit card transactions using a mobile credit card reader and printer. The entire system runs on Windows Mobile devices such as cell phones, and PDA devices. The company offers one stop shopping that includes full functioning merchant accounts, bundled hardware and software solutions, along with software only and custom software solutions for those businesses that require particular setups for their mobile point of service needs.

Mi Business System customers can choose from several exciting options at reasonable prices.

The Mi PAYMENT module is for businesses that need to accept credit card payments, anytime, anywhere. It's great for service orientated businesses that accept tips. The mobile device actually prompts the customer to add a tip and then calculates different percentages for them to choose from allowing for increased revenue for both the company and its valued staff members.

Those interested in easy to use software need to look no further than the Mi SALES and SERVICES module, this module schedules appointments and services, tracks inventory, retains client and service call information, offers VIP discounts, and cash control recommendations.

Finally there is the Mi ACCOUNTING module that sends data to and from the Mi Business System and QuickBooks for easy data reconciliation.

As individuals and companies pine for new ways to improve productivity, smart companies around the world are recognizing the Mi Business System as a valuable asset. Prices range from \$97 for the setup of the sales and service software with a \$20 monthly fee, to \$447 for the mobile credit card receipt printing device.

For a limited time interested parties can sign up for a free 30 day trial at www.JMSoftware.com
