

Automated E-Waste Shredding System Operational

Asset LifeCycle broadens its current collection services to create a complete Electronic Reclamation and Waste Processing Facility.

Topeka, KS, January 04, 2008 --(PR.com)-- Asset LifeCycle, LLC (ALC) is pleased to announce the completion of its greatly anticipated Automated Electronic Waste (E-waste) Destruction/Shredding System.

In the beginning of 2007, Asset LifeCycle, LLC received a grant from the Kansas Department of Health and Environment Bureau of Waste Management to help finance the first and only Automated Processing Plant in the state of Kansas. Asset LifeCycle will broaden its current collection services creating a complete Electronic Reclamation and Waste Processing Facility.

Link to grant: http://www.kdheks.gov/waste/sw_grants/round15.html

In September of 2007 ALC, received its permit to operate an E-waste recycling and reclamation facility in the state of Kansas ([First and only permitted mechanical e-waste recycling and reclamation facility in the State of Kansas...](#))

For 2008, Asset Lifecycle has expanded its operations to answer the demand, from the commercial and consumer sectors, for secure asset disposal. Their answer is 'YES'. The expansion will allow ALC to perform the highest level of security - complete asset destruction.

Shredder

The automated system features a 200HP SSI Shredder, which has the capacity to shred up to 6 ton of material per hour. This system was designed to process electronic waste, shredding and separating the components (ferrous metal, copper, aluminum, other precious metals, and plastic. The addition of the shredding system will allow Asset LifeCycle to be the premier, full-service, electronic waste processor in the Midwest.

Process

Asset LifeCycle continues to be the regional leader in advanced recycling technologies. Originally formed as an asset disposal company catering to medium and large businesses, ALC has expanded its offerings to include compliant electronic disposal for anyone. ALC has developed a premier and professional data and asset destruction solution for any size business or consumer.

ALC has a unique process that evaluates in-coming equipment, re-deploys working equipment, extracts parts that can be re-used and recycles remaining products and components. The processing line includes sophisticated shredders to grind equipment into pieces smaller than two inches. From there, a series of separators and magnets separate the component metals and plastics for recycling.

"As one of the region's largest recyclers of electronics, we are extremely pleased to be expanding our

recycling solutions to include shredding”, stated Beverly Drew, President of Asset LifeCycle. "Our commitment to recycling and sustainability is clearly demonstrated through continuous investment into our fully integrated recycling efforts that offers scalable growth potential and environmental benefits for all Midwest businesses", she added.

This new solution compliments other ALC programs. For example, when ALC receives a shipment of assets, the items that are no longer remarketable can be broken down into recyclable material and sent off in bulk quantities to refineries. In 2007, ALC has helped customers recycle over 2 million pounds of material, which is 2 million pounds of material that is diverted from our landfills.

About

Asset LifeCycle, LLC (or "ALC") is a Woman-owned business that prides itself in providing complete Asset Disposal and Recycling solutions for all surplus material, specializing in Information Technology equipment. All businesses are unique and require a unique solution. ALC services can be customized, catering to the diverse asset disposal requirements of every client.

Not only does Asset LifeCycle have an obligation to their clients to deliver the best asset disposal and recycling services available; they have an obligation to the environment and the future to protect our natural resources from being unnecessarily depleted. They guarantee to perform their services adhering to all EPA Guidelines, State and Federal Regulations, as well as their own strict criteria.

Mission: "Asset LifeCycle is committed to being a leader in developing and utilizing materials recovery and recycling technologies, ensuring healthy, environmentally safe and responsible methodologies for reducing surplus electronic assets entering the landfills or waste stream."
