

RJK Explorations (RJX.A) Intersects .261 Oz Gold Per Ton Over 6.6 Ft on the Goldie Gold Property

RJK Explorations Ltd. (RJX.A) has intersected a higher grade gold zone in the latest drilling program on the Goldie Gold Property. One intersection was .261 oz gold per ton over 6.6 ft.

Kirkland Lake, Canada, January 12, 2008 --(PR.com)-- RJK Explorations Ltd. (RJX.A: TSXV) reports that it has received assay results from seven drill holes on its Goldie Property located on the Trans Canada Highway approximately 30 miles west of Thunder Bay Ontario. The 3,760 acre Goldie Property is a joint-venture with GLR Resources Inc. (GRS: TSX)

Drill Hole GLD07-24 intersected 8.95 grams/tonne (0.261 oz gold/ton) over 2m at a vertical depth of approximately 85m. This Phase 2 drilling - for a total of 2176m - combined with the Phase 1 drilling program has only tested to shallow depths approximately 1,200 meters of strike length on the "South IP Zone". Determination of true widths, auriferous zone distribution and related statistics are pending as are assay results for the final two holes (214m subtotal).

This zone was originally indicated by a geophysical anomaly extending over a considerable strike length on the property. Previously reported intercepts suggested a single, shallow-dipping zone. Incoming Phase 2 drill results and other property data are now being tabulated for evidence of multiple zones or structures with strike and cross-trend expressions. "RJK intends to target this area of higher-grade mineralization in the next round of drilling. If compounded zoning or structure is demonstrated by further drilling, this will greatly expand the range of possibilities for the Goldie property" says Glenn Kasner, President and CEO.

Diamond drill core has been sawn, with half the core being stored at secure facilities Conmee Township and the other half sent to Polymet Inc. Laboratories of Cobalt, Ontario. Analytical integrity checks have included insertion of certified reference materials. Mr. Julius Hava P.Geo. is the qualified person for the information contained in this press release and is a Qualified Person within the meaning of National Instrument 43-101.

For maps showing the drill hole locations and sections, go to the company web site.
