

CJP's 2nd Global Jatropha Hi-Tech Agricultural Training Programme in India from July-14-18, 2008

CJP has the privilege to provide most authoritative Knowledge platform known as Global Jatropha Hi-Tech Agricultural Training Programme for Development of Sustainable Non-Food Jatropha Oil Crop Projects, Programmes and Priorities to Feed Biodiesel Industry Worldwide.

Jaipur, India, March 13, 2008 --(PR.com)-- Centre for Jatropha Promotion & Biodiesel (CJP) is happy to announce the 2nd Global Jatropha Hi-Tech Agricultural Training Programme (JTP) in India from July-14-18, 2008. CJP has the privilege to provide most authoritative Knowledge platform known as Global Jatropha Hi-Tech Agricultural Training Programme for Development of Sustainable Non-Food Jatropha Oil Crop Projects, Programmes and Priorities to Feed Biodiesel Industry Worldwide.

The CJP is only the premier organization that arranges the unique training for all stakeholders to provide them the opportunity to understand, learn, act and implement the Jatropha plans from ground zero to Biodiesel production in a very successful manner.

The search for a viable alternative feedstock for biodiesel in 2007 has run hot and cold in 2007, Jatropha feedstocks garnered a great deal of attention from investors and the media. They are happy to note that their untiring efforts have made the Jatropha an alternative feedstock for building a sustainable biodiesel industry. A number of new development projects and plantations involving thousands and hundreds of thousands of hectares with investment of billions of dollars have been initiated during the year 2007.

Jumping of a lot of companies on the bandwagon has enhanced the role and responsibility of the CJP to provide them, the right steps to start the successful business ensuring that this crop is planted in the right way and with due cares to what's possible in terms of sustainable farming techniques.

Therefore, based on its proprietary knowledge plant science expertise enhanced technology and extensive experience and by integrating technical and managerial issues CJP has developed Jatropha Agricultural Training package (JTP) to deliver Competencies through Qualified trainers with a practical 'hands on' approach.

Mr. Manish Sharma, Director Training said, "It is our firm opinion that simply attending conferences can not provide you the better understanding of the multi dimensions Jatropha industry unless you encounter with ground realities of the subject and that is why CJP adopted the system of learning by doing."

He further added, "CJP Makes Available an Accessible Affordable Jatropha training Package that enables all stakeholders to understand, evaluate and explore the Jatropha for designing and developing Failsafe Energy farms System in a true manner."

Their qualified and certified training consultants provide comprehensive instruction from the extensive range and depth of courses reflecting right from Plant science and reliable state-of-the-art technology. The inaugural 5 days session from June 11-15, 2007 has been a Big success and was attended by

participants from more than 17 countries from USA, UK, EU, African, Asian and South Americans.

JTP is unique because of the capability to deliver an integrated "One Stop Solution" for Jatropha Agri-business operations to the agricultural and energy sector world wide.

About CJP

Centre for Jatropha Promotion & Biodiesel (CJP) India is the Global authority for scientific commercialization of Jatropha fuel crop.

CJP is dedicated to the development of oil seed bearing trees [OSBT] - non-food multiple vegetable oil plantation and technologies in order to reduce dependence on fossil fuels, bring greater control and security of fuel supply and reduce dangerous climate changing emissions, including CO₂.

CJP is pioneering the science, planting and production of inedible vegetable oils by planting of a variety of tree & non-food crop plantation.

CJP is engaged in scientific commercialization of non-food fuel crop- that designs and implements the growing of various oil seed bearing tree [OSBT] crops worldwide in a structured Agri-Supply chain, Value additions of inedible oil seeds and research activities thereon & provides support/services from "Soil to Oil" for development and establishment of the non -food Bio-fuel crops.

CJP uses its proprietary knowledge to implement programmes through its expertise, technology and IPR knowledge creating new industry and job creation and the offsetting of climate change.
