

## **FLATLIFT TV Lifts "Made in Germany" Now Also in Las Vegas**

*Flatlift founds branch with new online shop in the USA*

Las Vegas, NV, March 19, 2008 --(PR.com)-- FLATLIFT, the german TV lift manufacturer has founded a US subsidiary company in Las Vegas/Nevada. FLATLIFT TV Lift Systems USA INC. ([www.plasma-tv-lift.com](http://www.plasma-tv-lift.com)) is to contribute to opening up the US American and Canadian market and optimally cater to customers in these countries. The products of this company allow for the stylish integration of flat screens into furniture, walls and ceilings. If desired, the television can be operated elegantly and silently at the touch of a button on the remote control.

The advantage of the new branch for the customers in the USA: it is a direct local contact and the particularly comprehensive guarantee and service offers of FLATLIFT are available at the same rate as in Germany. Apart from the full five year basic guarantee the company offers a life long repair cost limit for many product lines. Therefore, even many years after the purchase, the cost in case of damage is limited to a maximum of 33% of the relevant new price. In addition to consultation and service (for continuous projects the FLATLIFT technicians can also be reached on weekends), the customers in the USA and Canada profit from significantly shorter delivery times.

"We already have many customers and requests from the USA and Canada, because in a region of avid technology and television fans, the interest in TV lifts and TV swivel systems is high," explains FLATLIFT manager Sascha Rissel. "With new company in the USA we immediately have the opportunity to consult and cater to customers in these countries without the detour via Germany. Our contacts for support and sales are now available almost around the clock. A service which will help us build on our fast growing market position and differentiate ourselves from the regional competitors. Our product quality is already extremely high and now we can offer corresponding services on location."
