

Things are Looking Up: Ceiling Domes Define Home Decor Renaissance

Ceiling design was once an important facet of home decorating but over the years has fallen by the wayside due to changing tastes and high costs. New production methods have resulted in a recent ceiling decor renaissance and a wealth of new options for designers and home owners.

Needham, MA, April 03, 2008 --(PR.com)-- Often forgotten in the interior design practices of today, ceiling accents were once an important focus of architecture and home decor. Over the years grandeur has slowly given way to modern simplicity and frugal budgets. Recently companies like InvitingHome.com have made classic details like ceiling domes, wood corbels and crown molding both affordable and easy to implement in any home. Let the Home Decor Renaissance begin.

Throughout the centuries people have been increasing the comfort of their homes by using pleasant interior design aesthetics to create a sense of warmth and calm. Modern materials and manufacturing processes have given rise to the popularity of interior [ceiling design](#) that would have been hard to imagine even a decade ago. As these accents increase in both practical and financially realistic usage they are also quickly becoming defining characteristics of our lives and homes. In fact, ceiling embellishments have reached a popularity not seen since the first half of the Twentieth Century.

It could be said that the ceiling is one of the largest blank canvases available for the practice of home improvement. Regardless, it is usually completely forgotten as a facet one can enhance via design. Creative new breakthroughs in ceiling designs can tailor a room to a specific feel or theme over and above simply that of an empty box. Available possibilities include ceiling medallions, ceiling rims, ceiling domes and even panel molding with decorative corners. Ceiling elements are not only a great way to bring life to a new home but are also suitable for restorations of historical interiors.

Off all the new “upper” additions to the home decor marketplace, [ceiling domes](#) have been most in demand as they are an affordable way to add luxury and style to a residence. There are many styles, sizes and shapes of ceiling domes available which make it easy for them to fit cohesively within any design. The most common materials used for their manufacturing are the durable and flexible team of polyurethane and fibreglass. Traditional dome material like plaster and gypsum were cumbersome and heavy which made installation difficult, inflexible and even dangerous.

Whether an interior is classified as traditional or contemporary, residential or industrial - ceiling domes may be incorporated to accentuate and beautify that space. Their renewed popularity has been embraced by interior designers around the country and the products are now available online for you to install yourself in the comfort of your own home. If you haven't yet considered making ceiling domes your next design-centric home addition, visit InvitingHome.com today to start visualizing the many breathtaking options.
