

Mutilizer Shortens Translation Time with Advanced Validation System

Mutilizer has enhanced its translation QA system to improve translation efficiency and quality. The configurable translation validation system supports implementing company best practices and contains also pre-defined recommended rule sets for common translation tasks.

Helsinki, Finland, April 19, 2008 --(PR.com)-- Mutilizer, leader in localization and translation software, has released an update to its translation QA system. Mutilizer's enhanced translation QA system further shortens translation time and improves translation quality by automatically checking for over 30 common translation mistakes as well as fixing many of them automatically.

The enhanced validation system contains pre-defined recommended validation rule sets. The pre-defined rule sets can be further configured and saved to be used as company policies. Mutilizer provides visual feedback on the translation quality to the translator thus bringing the quality issues immediately to the translator's attention for immediate fixing.

Enhancing translation quality with advanced tools shortens project schedule and saves money.

Mutilizer QA tools can be used in a wide selection of file formats. For more information please refer to <http://www.mutilizer.com/plugins>.
