

## **Miracle Truss Steel Buildings Help You Save Money, Time and the Environment in an Inflated Economy**

*Got a dream home you want to build or do you need an office space for your business? Discover the ways a steel building can enhance savings in a chaotic economy.*

Minneapolis, MN, May 13, 2008 --(PR.com)-- Miracle Truss® is doing its part to fight inflation and increasing building costs by offering steel buildings as a sound economical solution for residences or businesses. In anticipation of the steel price increases, Miracle Truss purchased additional steel before the prices went up and can now pass the savings on to their customers.

“Miracle Truss® steel buildings are not your average [pre-fabricated metal buildings](#). The savings go beyond monetary value and trickle down to other important factors such as time and energy,” said Mali Lind, Advertising & Marketing Director.

The main thing most people want to save on any purchase is money. Miracle Truss® steel buildings can cost 50% less than conventional buildings because they are pre-made and shipped ready to assemble - just unpack and start construction. And there are no worries about hiring skilled laborers to build it because a Miracle Truss® steel building is so easy anyone can do-it-themselves.

"Conventional buildings involve more time and more work costing you more money. Steel buildings offer all the benefits of conventional buildings plus additional features that make it a wiser choice for your residence or business," said Lind.

Steel buildings can also save the amount of time spent on construction. Miracle Truss® pre-fabricated steel buildings are manufactured in the USA by certified welders and come pre-cut, pre-drilled and pre-welded for easy assembly. This means less work, cutting down on the amount of time spent erecting a steel building. Each Miracle Truss® building comes with a clear, easy-to-read assembly manual containing detailed drawings as a guide.

But that's not all that can be saved with a steel building. With the popularity of "Going Green," Miracle Truss® steel buildings use environmentally-friendly construction methods such as an open-web truss design that provides a higher R- value than conventional methods when combined with standard insulation. The Miracle Truss® steel siding comes in many colors that can qualify for Energy Star efficient tax credits. Steel buildings also allow more flexibility for environmentally-safe components such as flooring and siding.

"Miracle Truss® steel buildings save you money on so many levels but the best is knowing that you can get a functional building that not only looks good but is good for the environment as well," said Lind. From woodworking shops, yard & garden storage buildings and [garages](#), to churches, airplane hangars and auto shops - and everything in-between - Miracle Truss® steel buildings take on a whole new meaning and design!

## About Miracle Truss®

Miracle Truss® is an industry leader in steel and metal buildings that are a unique hybrid of steel and edge-mounted wood which gives you maximum versatility and durability. For more than 35 years Miracle Truss® steel buildings have survived blizzards, tornadoes, hurricanes, typhoons, and earthquakes without a single report of structural damage.
