

## **Burstek Announces BurstekReporter Public Beta Release**

Fort Myers, FL, May 15, 2008 --(PR.com)-- Burstek announces the availability of the public beta release of its next-generation Web analysis and security solution, BurstekReporter. Utilizing state-of-the-art database and retrieval algorithms, BurstekReporter quickly identifies security and network risks while improving employee productivity and network resource usage.

Based on exception reporting, BurstekReporter can quickly and accurately pin-point problem areas in time to take action. BurstekReporter is fast, utilizing revolutionary technology with its database, it delivers most reports in seconds which can drill-down to specific user and category summaries. BurstekReporter's Web interface allows management to identify risks remotely from where the risks are occurring. With seamless Active Directory integration and support for major proxies and firewalls, BurstekReporter takes Web user reporting for enterprise organizations to another level.

Clients can begin evaluating BurstekReporter by requesting a download from [www.burstek.com/brbeta.htm](http://www.burstek.com/brbeta.htm).

Burstek has been providing sophisticated Internet security solutions to global organizations since 1997.
