

Medical Billing Software MPMsoft Announces Release of MPM Office 4.5aLIVE

As the medical industry enters yet another era of shrinking income, a medical billing software maker, MPMsoft offers a medical office software that helps practices save money, while at the same time helping them gain compliance to a growing list of state and federal regulations.

Napa Valley, CA, July 09, 2008 --(PR.com)-- MPMsoft's most recent release of its new generation of Windows desktop software provides an affordable, yet effective solution to the complex task of [medical billing](#).

While many well known [medical billing software](#) can tout price tags well over \$14,000 MPMsoft represents a new breed of medical office software that offers a complete electronic claims management system for under \$3,200, and each software package comes with unlimited one-on-one training and support that's based here in the U.S and is delivered on demand by live trainers over the web.

How can software that's almost five times cheaper still meet the complicated needs of a fast paced medical practice? "We developed the software working out of my wife's billing offices," states founder Jim Muschetti. "She hated her medical billing software, and I thought, 'I can do that'. After two years I had a prototype; another year of hard work and I had a workable product."

"Since that time we've adapted the program to over thirty-two medical specialties and subspecialties, including Anesthesiology, Surgery, Internal Medicine, Family Practice, Podiatry, Ophthalmology, Physical Therapy, Chiropractic, Mental Health, and DME (durable medical equipment), along with Emergency and Non-Emergency patient Transportation. If you bill Medicare or Blue Cross, it's for you."

Yet with all the adaptations, the program remains the simplest and easiest to learn, taking only about 30 minutes to setup and begin billing.

Says veteran Biller of over twenty-five years, Sharon Garian (wife of doctor) "I've looked at every practice management system there is (having owned many of them myself), and within 15 minutes knew I was in love. It does everything I need, all the functions and reports I really need are right there."

"My wife is my toughest fan (and strongest supporter)," says Muschetti. "She bills for a wide range of medical specialties and must have a program that works flawlessly. Needless to say, software updates were a touchy subject at meal times around our house. A lot of credit goes to her. The program can flawlessly manage the critical functions of patient scheduling, patient billing, patient accounting, and every aspect of claim management. Our motto is 'Your claims will always go through -Always.'

A Medical Biller's Dream?

"Today we have claims moving effortlessly through some 30 [clearinghouses](#) across fifty states, to over 2800 insurance payers. It's amazing what a handful of engineers can do when they work day and night five years straight.

Annual support for the program - including all software updates - is a single flat fee of \$598 per year. Says Muschetti, "People tell us we're crazy, but they never complain about the price. We've been profitable all but three months from the get go. After two years of selling in earnest, we have over 1500 doctors and a user-base of 4,200 office staff using the program in all fifty states. Our next version of the program we're thinking of calling 'revolution'. We want doctors to know that there is an affordable billing solution out there that will truly meet their office's needs."

About MPMsoft

MPMsoft is [practice management](#) and medical billing software company based in California's Napa Valley, whose mission is to provide affordable training, support, and billing software to practices nationwide. The program supports Win2000 (sp4), WinXP, VISTA, Win2003 and 2008 Server.
