Mosquito Genie® Offers World’s First Table-Lamp that Kills Mosquitoes

San Diego, CA, April 24, 2013 --(PR.com)-- Mosquito Genie® LLC is pleased to introduce the world's first table-lamp that replaces candle lights and kills mosquitoes. It is all natural, solar-powered and perfect for hotels, restaurants, taverns and residential homes.

This is an ideal solution for any outdoor area where human beings can enjoy an out-of-doors experience at the end of the day when the sun goes away and mosquitoes come out to prey.

Mosquito Genie® is the new way to kill mosquitoes with no smells, man-made chemicals, CO2 or traps to clean-up or monitor. It provides table lighting from dusk till dawn replacing traditional candles and bulky mosquito traps. It is so unique that it has been issued a registered Trademark, Utility Patent and a Design Patent. It greatly reduces the pesky presence of mosquitoes, gnats and no-see-ums in outdoor areas. Just set it and forget it.

No longer will hospitality customers or residential consumers have to worry about mosquito bites because Mosquito Genie® will be killing mosquitoes silently while providing outdoor lighting - good for 3 months of service before needing a refill. Mosquito Genie® kills mosquitoes, gnats and no-see-ums within a 30 foot radius of the lamp, covering over 1,000 square feet per lamp.

About three weeks to a month after you set up Mosquito Genie®, you should notice a reduction in your local mosquito population. It is not an instant zapper and extreme mosquito problems in an outdoor area can require more than one Mosquito Genie®. It's good to get started early in the spring, when the weather starts to warm up and the first generation of mosquitoes begin to hatch.

Mosquito Genie® makes your outdoor evenings more pleasant ×× be it on a deck, patio, garden, backyard, courtyard, balcony, gazebo or veranda, and looks elegant sitting outdoors. The solar powered, copper top charges up during the day and the light from the lamp shines from dusk till dawn attracting female mosquitoes. Mosquito Genie® was created in California by an Engineering and Industrial Design team that has been recognized for design excellence by The Museum of Modern Art in NYC.

Purchase these units in early spring and enjoy a mosquito free summer because one female mosquito can lay 300 eggs 10 times a month during a 4 week life cycle. This means one female mosquito can produce several thousand new mosquitoes next month. With that in mind, it is important to get an early start to fight a mosquito infestation preventing thousands of new ones next month.

Mosquito Genie® is safe for people, pets and the environment. It is self-contained using no power cord, and there are no traps to clean out because mosquitoes just fly away and die. It's quiet and peaceful with no annoying zapping sounds to disturb your evenings, and automatically turns on at disk and off at dawn. It does not kill ladybugs, fire-flies or other beneficial insects. It is simpler, smaller and smarter than other competitive mosquito killing products.
For further features, benefits and availability visit www.mosquito-genie.com Free Samples are available for testing in outdoor areas.
