Editage® Offers Ease of Journal Manuscript Submission to Authors Through Aries’ Manuscript Ingest Functionality for Editorial Manager®

Editage announced its commitment to providing a seamless manuscript submission experience for authors by becoming the first to adopt Aries’ manuscript “ingest” functionality for Editorial Manager. This partnership promises to bring Editage’s 70,000+ authors closer to the community of more than 6,000 scholarly journals using EM.

Philadelphia, PA, January 28, 2015 --(PR.com)-- Editage, a leading provider of editorial and publication support services for the global research community, announced its commitment to providing a seamless manuscript submission experience for authors by becoming the first to adopt Aries’ manuscript “ingest” functionality for Editorial Manager (EM), the world's leading online manuscript submission and peer review system. This partnership between Editage and Aries promises to bring Editage’s 70,000+ authors closer to the community of more than 6,000 scholarly journals using EM. As part of the collaboration, Editage will soon be able to directly transfer manuscripts on behalf of its authors to participating journal EM submission sites and simplify the manuscript submission workflow for both authors and journals alike.

Authors today use a range of manuscript services to assist with document preparation, including bibliography management, collaborative authoring tools, language polishing, and journal selection services. However, the process of submitting manuscripts to journals is often time-consuming and unfamiliar for researchers. The addition of the manuscript ingest functionality to EM promises Editage's scholarly authors a much simplified and hassle-free submission experience. Aside from the time saved and the ease of submission, access to an expansive set of journals across scientific disciplines and subscription models is of immense value to authors.

In the publisher community, providing authors with a smooth manuscript submission experience has been a priority for a long time. Now with simple manuscript transfer possible from author support service providers like Editage to journals using EM, journals can expect increased submissions. The ingest service also permits use of ORCID identifiers to ensure that transferred submissions are accurately mapped to prior author registration records.

On the occasion of the announcement, Donald Samulack, President, U.S. Operations, Editage, commented, “For a young researcher looking to build a publication repertoire, the experience of manuscript submission to journals can be new and unnerving. For the busy scientist, time is at a premium. The ingest functionality of EM works to solve both problems, and by adopting it in our own online system, we're excited to bring our authors closer to their goals of publication and recognition.”

Richard Wynne, Vice President of Sales and Marketing, remarked, “Editage is a leading supplier of manuscript language editing services and we are delighted that they are the first adopter of the EM ingest service. By collaborating to solve market problems we're able to grow our respective services.”

Aries is exhibiting at the upcoming PSP Annual Conference, February 4-6 in Washington DC. If you
would like to learn more about the manuscript ingest service, please arrange to meet the Aries team at this event.

About Cactus Communications (www.editage.com | www.cactusglobal.com)

Cactus Communications (CACTUS) is a leading global scientific communications company with offices in the US, Japan, India, South Korea, and China. Editage is the flagship brand of CACTUS, recognized worldwide in publishing and academic communities. As a pioneer in everything we do, our goal at Editage is to help scholars break through the confines of geography and language, to bridge the gap between authors and peer-reviewed journals, and to accelerate the process of publishing high-quality research. To this end, we partner with publishers, journals, academic societies, and pharmaceutical companies worldwide and leverage the expertise of our 1,400+ professionals to create compelling, high-quality scientific communications. All of these elements, together, have supported the growth of CACTUS to become a strong and stable industry leader. Editage - helping you get closer to your authors and helping authors get published.

About Aries (www.editorialmanager.com)

Aries Systems transforms the way scholarly publishers bring high-value content to the world. The company's innovative and forward-looking workflow solutions manage the complexities of modern print and electronic publishing - from submission, to editorial management and peer review, to production tracking and publishing channel distribution. As the publishing environment evolves, Aries Systems is committed to delivering solutions that help publishers and scholars enhance the discovery and dissemination of human knowledge. Publish faster, publish smarter, with Aries Systems.
