

LockSourcePro Launches Commercial Locksmith and Security Vendor Directory

LockSourcePro has launched a commercial security vendor directory connecting property managers and contractors with qualified commercial locksmiths and access control professionals. The platform focuses exclusively on commercial environments and helps organizations find trusted security vendors quickly and efficiently.

Hartford, CT March 02, 2026 --([PR.com](https://www.pr.com))-- LockSourcePro has officially launched a commercial security vendor directory designed to connect property managers, general contractors, and facility managers with qualified commercial locksmiths and security professionals.

LockSourcePro is a commercial-only platform focused on helping organizations locate trusted vendors for door hardware, access control, and institutional security projects.

Unlike general service directories that mix residential and commercial contractors, LockSourcePro focuses exclusively on commercial and institutional environments including office buildings, schools, healthcare facilities, industrial properties, and multi-unit buildings.

Users can search for vendors specializing in commercial locksmith services, access control systems, door hardware installation, Division 8 contract hardware, and electronic security solutions.

Vendor listings include company information, service areas, contact details, and certifications, making it easier for decision makers to identify qualified professionals.

LockSourcePro helps commercial locksmiths and security professionals increase visibility and connect directly with property managers and contractors responsible for building security.

The platform operates without pay-per-lead fees, allowing vendors to build long-term commercial relationships.
